The present sequence is mouse Stat3 protein fragment containing 1-154 amino acids of Stat3 protein. This Stat3 fragment showed very weak binding to c-Jun protein in the cell extract. The invention relates to methods for identifying interacting regions of transcription factors and methods for identifying agents which modulates the interaction between a transcription factor such as c-Jun and a Stat protein such as Stat-1 and Stat-3, useful for modulating gene transcription e.g., cellular
                                                                                                                                                                                                                                                                                                          Mouse; Stat3 protein; transcription factor; c-Jun; gene transcription; cellular transformation; dysproliferative disease; cancer; psoriasis;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Identifying an agent for use in modulating the interaction between transcription factor c-Jun and a Stat3 protein.
                                                                                                                                                                                                                                                                                                                                                                                                /note= "Stat3-c-Jun interaction region 1"

A highly homologous gene (given in AAQ89339) was isolated that encoded a 91 kDa protein (AAR72080) (Stat1) that was responsive to interferon-gamma. Using a fragment of the mouse gene as probe, 2 additional members of the 113-91 family of receptor recognition factor proteins were isolated. The 2 genes (AAQ89339 -40) were cloned in plasmids 13sfl and 19sf6 and encoded proteins termed Stat4 (AAR72081) and Stat3 (AAR72082), respectively. (Updated on 25-MAR-

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New STAT protein DNA-binding domain peptide(s) - useful for diagnosing, preventing or treating cellular dysfunction, e.g. oncogenesis, inflammation, parasitic disease or autoimmunity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Mouse signal transducer and activator of transcription (STAT) protein STAT4 (AAW03176) serves a dual purpose, i.e. signal transduction from ligand-activated receptor kinase complexes followed by nuclear translocation and DNA binding to activate transcription. Recombinant STAT4 can be obtd. using cDNA clone 19sf6 (AAT31278) obtd. from splenic/thymic cells. STAT4 includes a DNA-binding domain (see also AAW03167) capable of both receptor recognition and message delivery vi DNA binding in a receptor-ligand specific manner. STAT proteins and the DNA binding domains (see also AAW03165-75) are useful for screening antagonists used to inhibit STAT-mediated signal transduction and

The present invention relates to a crystal of an N-terminal fragment of a signal transducer and activator of transcription (STAT) protein. The crystal effectively diffracts X-rays, allowing the determination of the atomic coordinates of the N-terminal domain to a resolution of greater than 5.0 Angstroms. The present sequence is the N-terminal domain of the murine STAT 3 protein. The N-terminal domain enables STAT dimers to interact and bind DNA cooperatively, a mechanism important for gene activation. The crystals are useful in drug screening and development by selecting a potential drug by performing rational drug design with the 3-dimensional structure determined for the crystal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    LGEIDQQYSRFLQESNVLYQHNLRRIKQFLQSRYLEKPMEIARIVARCLWEESRLLQTAA 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ò
         signal transducer and activator of transcription (STAT) proteins for the discovery and development of new drug compounds based on the structural compound that binds to the N-terminal domain of a STAT protein.

Identifying a compound that enhances or diminishes the binding of the dimerity of a compound that enhances or diminishes the binding of the site; or identifying a compound that enhances or diminishes the ability of STAT protein dimers to induce the expression of a gene operably under the control of a promoter containing at least two adjacent weak binding sites for STAT protein dimers. The methods are used for identifying new control of a promoter containing at least two adjacent weak binding sites An antagonist of STAT N-terminal dimeric interactions that a promoter of a gene, could be useful situación in the treatment of diseases, e.g. inflammation, allergy, asthma and leukaemias. On the other hand, an agonist of N-terminal dimeric interactions between STAT dimers, can be used as drugs in the treatment of diseases e.g. anaemia, neutropaemia, thrombocytopaemia, cancer, obessity, viral diseases and growth retardation. The present sequence is murine STAT3 protein
                                                                                                                                                                                                                                                                                                                                                                           61 LGEIDQQYSRFLQESNVLYQHNLRRIKQFLQSRYLEKPMEIARIVARCLWEESRLLQTAA 120

transducer and activator of transcription (STAT) protein, where the crystal effectively diffracts X-rays for the determination of the atomic coordinates of the N-terminal domain of the STAT protein to a resolution of greater than 5.0 Angstrom. The methods and compositions are useful for the design and screening of drugs that enhance or inhibit STAT-STAT dimer interactions. The present sequence represents the amino acid sequence of mouse STAT3 protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                LGEIDQQYSRFLQESNVLYQHNLRRIKQFLQSRYLEKPMEIARIVARCLWEESRLLQTAA 120

Modulating angiogenesis and an immune response in an individual, for treating a hypoxic or ischemic condition, comprises administering a compound that modulates the activity of a signal transducer and activator transcription 3.

Disclosure; Page 87-89; 94pp; English

\$\frac{1}{2}\$\frac

The invention relates to a method of modulating angiogenesis and immune response. Method involves administering to an individual a compound that modulate the activity of signal transducer and activator of transcription 3 (Stat3). Modulating angiogenesis is useful for treating or preventing, thypoxic or ischaemic condition or disorder which is the result of stroke, ischaemia in the lower extremities, infarction, inflammation, tissue ischaemia in the lower extremities, infarction, inflammation, trauma, vascular occlusion, prenatal or postnatal oxygen deprivation, suffocation, shock, chronic obstructive pulmonary disease, choking, asphyxia, hypoglycaemia, chitrogen necrosis, proliferative angiopathy e.g. diabetic microangiopathy with neovascularisation. Suppressing an immune response is useful for an eliotating a syndrom of an autoimmune disease such as systemic lupus erythematosus, multiple sclerosis, insulin dependent diabetes mellitus, syggenen's syndrome, scleroderma, polymyostitis, chronic active hepatitis, mixed connective tissue disease, primary biliary cirthosis, pernicious anaemia, autoimmune thyroiditis, idiopathic Addison's disease, vitchingo, gluten-sensitive enteropathy, autoimmune butropenia myasthenia gravis, idiopathic thrombocytopenia purpura, Grave's disease, yndurating or treating chesse which includes sarcomas and chesses, rheumatoid attritis, cirthosis, pemphygus vulgaris, autoimmune thyroiditis, idiopathic proliferative and encedence of such active and oncedence of such and stratis, autoimmune thyroiditis, idiopathic proliferative and oncedence of such as sarcomas and consecuted as such and such carcinomas e.g., bladder carcinoma, colon carcinoma, chronic leukaemia, fibrosarcoma, liposarcoma, degenerative disorders, growth deficiency, hypoproliferative disorders, physical trauma, lesions and wounds. The method is also used in gene therapy. The present sequence is human

Examining the ischemic condition (e.g. occlusive ischemia) by measuring expression levels of particular genes defined in the specification or by determining the expression profile of a gene group comprising these genes.

Claim 2; Page 1084-1087; 2690pp; English.

The present invention describes a method for examining ischaemic conditions, comprising measuring the expression levels of particular genes (1) in a test sample or determining the expression profile of a gene group in the sample comprising genes selected from (1). The method is useful for examining the ischaemic condition (e.g. compressive ischaemia) by measuring expression levels of particular genes (AB199202 to AB199912, encoding the expression profile of a gene group comprising these genes. The expression levels or expression profiles produced by these genes are used as an indicator when screening for ischaemic condition-improving drugs or therapbutics for ischaemic diseases. AB199913 and AB199914 represent PCR primers for a mouse ischaemic condition related sequence, which are used in the exemplification of the present invention

The invention relates to a method of modulating angiogenesis and immune response. Method involves administering to an individual a compound that modulate the activity of signal transfucer and activator of transcription 3 (Stata). Modulating angiogenesis is useful for treating or preventing hypoxic or ischaemic condition or disorder which is the result of stroke, ischaemia, coronary atherosclerosis, myocardial infarction, inflammation, tissue ischaemia in the lower extremities, infarction, inflammation, tissue ischaemia or postnatal oxygen deprivation, suffocation, shock, chronic obstructive pulmonary disease, choking, asphyxia, hypoglycaemia, epilepsy, emphysema, adult respiratory distress syndrome, cardiac arrest, introgen necroasis, proliferative angiopathy e.g. diabetic microangiopathy with neovascularisation. Suppressing an immune response is useful for ameliorating a symptom of an autoimmune disease such as systemic lupus crythematosus, multiple solerosis, insulin dependent diabetes mellitus, signate onnective tissue disease, primary bilary cirrhosis, pernicious anaemia, autoimmune thyroiditis, idiopathic Addison's disease, vitiligo, gluten-sensitive enteropathy, autoimmune neutropenia, myasthenia gravis, idiopathic thromborycopenia purpura, Grave's disease, coodpestures and carearist disease. The method is useful in preventing or treating carcinomas e.g., bladder carcinoma, colon carcinoma, chronic leukaemia, chronic leukaemia, ilposarcoma, disease, method is see which includes sarcomas and carcinomas e.g., bladder carcinoma, colon carcinoma, chronic leukaemia, thromborycomena, physical trauma, lesions and wounds. The method is also used in gene therapy. The present sequence is human cry
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             LGEIDQQYSRFLQESNVLYQHNLRRIKQFLQSRYLEKPMEIARIVARCLWEESRLLQTAA 120
compound that modulates the activity of a signal transducer and activator

                                                                                                                                                             New acute phase response factor - for developing inhibitory agents for treating diseases induced by cytokine(s) such as IL-6, e.g. inflammatory
                                                                                                                                                                                                                                                   The sequence represents a mouse acute phase response factor (APRF), a transcription factor related to signal transmission of interleukin-6 (I 6). The protein is encoded by a CDNA, isolated from a mouse liver CDNA library using a polymerase chain reaction product (amplified using primers derived from an IL-6-treated mouse liver peptide) as a probe. APRF-inhibitors, e.g. antibodies, antisense oligonucleotides or ribozymes, may be used to treat diseases induced by IL-6, e.g.

The present sequence represents a predominant allelic variant of human Signal Transducer and Activator of Transcription 3 (STAT3) protein, an intracellular transcription factor which mediates IL-6 signals. The encoding sequence differs from the original published human STAT3 gene sequence (Akira et al., 1994). Host cells comprising a recombinant STAT3 bNA molecule can be used for the recombinant expression of the variant. STAT3 protein is useful as a medicament or pharmaceutical composition for treatment of autoimmune or inflammatory diseases

                                                                                                                                                                                                                                                                                                                                                                  ö
                                                                                                                                                          The sequence corresponds to a human acute phase response factor (APRF), a transcription factor related to signal transmission of interleukin-6 (IL-6). The protein is expressed from a human placenta cDNA, isolated using an IL-6-treated mouse liver cDNA probe. APRF-inhibitors, e.g. antibodies, antisense oligonucleotides or ribozymes, may be used to treat diseases induced by IL-6, e.g. inflammatory disease, leukemia, cancer,

transcription 3 (STAT-3). The invention provides a crystal of a core portion of a STAT protein in dimer form with an 18-mer duplex DNA (see AAA89233) that contains a binding site for the STAT dimer. The core portion comprises a colled-coil domain comprising 4 long helices, a DNA binding domain which contains an immunoglobulin-like fold, a C-terminal crystal is of sufficient quality to perform X-ray crystallography studies. Methods of preparing the crystals are included in the invention. Knowledge of the STAT protein's 3-dimensional structure will aid in structure-based drug design. The crystal can be used in drug screening assays to identify agonist and antagonist compounds. Antagonists can be used to treat inflammation, allergy, asthma and leukaemia, and agonists core treat anaemia, neutropenia, thrombocytopenia, cancer, obesity, viral diseases, growth retardation, and other conditions characterized by insufficient STAT activity
                                                                                                                                              present sequence is that of human signal transducer and activator of
Novel crystal useful in drug screening assays, comprises portion of signal transducer, activator of transcription and duplex DNA.
                                                                                       Disclosure; Col 67-71; 206pp; English

```
The invention relates to a complex of protein interactions

(forming a protein-protein interaction map, PIM) in adipocyte cells as

defined in the specification, or polynucleotides in adipocyte sencoding

Co the polypeptides. Also included are a recombinant cell expressing the

interacting polypeptides and a method of selecting a modulating compound

in adipocyte cells, by cultivating a recombinant host cell on a selective

compound in the toward for the recombinant host cell on a selective

compound with two vectors, where the first vector comprises a

compound with two vectors, where the first vector comprises a

compound the second vector comprising a polynucleotide encoding a second

hybrid polypeptide and an activating domain that activates the toxic

creporter gene, when the first hybrid polypeptides interact and

crecombinant host cell (i.e. using the yeast two-hybrid system). The

crecombinant host cell (i.e. using the yeast two-hybrid system). The

complexes are useful for identifying compounds that modulate the protein-

crecombinant host cell (i.e. using the yeast two-hybrid system). The

complexes are useful for identifying compounds that modulate the protein-

crecombinant host cell (i.e. using the yeast two-hybrid system). The

compound isolated by the method is useful for treating and preventing

compound isolated by the method is useful for treating and preventing

cobesity or metabolic diseases. The interactions between the proteins of

the complex sequence represents a member of the protein complex of the

compound, used as the bait protein in the yeast two-hybrid assay
Novel complex of protein-protein interactions in adipocyte cells for identifying compounds that modulate the protein-protein interactions and useful for treating obesity and metabolic disorders.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

J. Biol. Chem. 277:8004-8011(2002).
-!- FUNCTION: Transcription factor that binds to the interleukin-6 (IL-6)-responsive elements identified in the promoters of various acute-phase protein genes.
-!- PATHWAY: Involved in the gpl30-mediated signaling pathway.
-!- SUBUNIT: Forms a homodimer or a heterodimer with a related family member (at least STATI). Interacts with NCOAI.
-!- SUBCELLUJAR LOCATION: Cytoplasmic; translocated into the nucleus in response to phosphorylation.
                                                                                                                                                                                                                                                                                                          PHOSPHORYLATION ON SERINE.

ISOJG-P40765-2; Sequence-VSP 010474;
IISSUE SPECIFICITY: Heart, brain, placenta, lung, liver, skeletal muscle, kidney and pancreas.

PTM: Tyrosine phosphorylated in response to IL-6, IL-11, CNTF, ILF, CSF-1, EGF, PDGF, IFN-alpha and OSM. Serine phosphorylation is important for the formation of stable DNA-binding STRT3 homodimers and maximal transcriptional activity.

SIMILARITY: Belongs to the transcription factor STAT family.

SIMILARITY: Contains 1 SH2 domain.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  .; IDA.
                                                                                                                                                                                                                                             -i-FUNCTION: Transcription factor that binds to the interleukin-6
-i-FUNCTION: Transcription factor that binds to the interleukin-6
-i-FUNCTION: Transcription genes. STAT3B interacts with the N-terminal acute-phase protein genes. STAT3B interacts with the N-terminal part of JUN to activate such promoters in a cooperative way.
-i-PATHWAY: Involved in the gpl30-mediated signaling pathway.
-i-SUBCUNIT: Forms a homodimer or a heterodimer with a related family member (at least STAT1). Interacts with NCOA1 (By similarity).
-i-SUBCELLULAR LOCATION: Cytoplasmic; translocated into the nucleus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Name-Del-701;

Isole PABCIFICITY: STAT3A is seen in the liver, although in a much less abundant manner.
Isole Babindant manner.
Isole Babindant manner.
Isole PABCIFICITY: STAT3A isole Babindang Stata is important for the formation of stable DNA-binding STAT3 homodymes and maximal transcriptional activity (By similarity).
Isole Babindan STAT3 belongs to the transcriptional activity (By similarity).
Isole Babindan STAT family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           GO; GO:0005737; C:cytoplasm; IDA.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 9
                                                                    acute-phase protein genes.
-!- PATHWAY: Involved in the gp130-mediated signaling pathway.
-!- SUBUNIT: Forms a homodimer or a heterodimer with a related family member (at least STATI). Interacts with NCOAI (By similarity).
-!- SUBCELULAR LOCATION: Cytoplasmic; translocated into the nucleus in response to phosphorylation (By similarity).
-!- FTM: Tyrosine phosphorylation (By similarity).
-!- FTM: Tyrosine phosphorylated in response to IL-6, IL-11, CNTF, ILF, CSF-1, EGF, PDGF, IFN-alpha and OSM. Serine phosphorylation is important for the formation of stable DNA-binding STAT3 homodimers and maximal transcriptional activity (By similarity).
-!- SIMILARITY: Belongs to the transcription factor STAT family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 1 MAQWNQLQQLDTRYLEQLHQLYSDSFPMELRQFLAPWIESQDWAYAASKESHATLVFHNL
-!- FUNCTION: Transcription factor that binds to the interleukin-6 (IL-6)-responsive elements identified in the promoters of various
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Pfam; PF0017; STAT_alpha; 1.

Seyfert H.M., Wheeler T.T., Moolenaar A., Pitra C.;
The STATSB-encoding gene was flipped across the STAT3/STAT5A-locus
The STATSB-encoding gene was flipped across the STAT3/STAT5A-locus
The STATSB-encoding Gene was flipped across to the interleukin-6

I. Submitted (JAN-2004) to the EMBL/GenBank/DDBJ databases.

I. Submitted (JAN-2004) to the EMBL/GenBank/DDBJ databases.

I. FUNCTION: Transcription factor that binds to the interleukin-6

I. Submitted (JAN-2004) in the gpl30-mediated signaling pathway.

I. PATHWAY: Involved in the gpl30-mediated signaling pathway.

I. SUBUNIT: Forms a homodimer or a heterodimer with a related family member (at least STAT1). Interacts with NCOA1 (By similarity).

I. SUBCELULAR LOCATION: Cytoplasmic; translocated into the nucleus in response to phosphorylation (By similarity).

I. SIMILARITY: Belongs to the transcription factor STAT family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              61 LGEIDOOYSRFLOESNVLYOHNLRRIKOFLOSRYLEKPMEIARIVARCLWEESRLLOTAA 120
